

Terrain & Town Kit — Exact Tile List

Companion doc for the incoming "master island terrain sheet." Rewritten 2026-08-14 against a direct reference image (a finished pirate-town scene: curbed cobblestone roads, raised building plinths with entrance steps, dense street props, jetty with moored boat) — every item below is either visible in that reference or a tiling-mechanics requirement it implies (corner/junction/end pieces for anything linear, since a curb or a road needs the same wrap-around-a-corner treatment a road itself does).

208 distinct, named items (164 in the original pass, 44 more in §XX's addendum, weighted toward terrain/roads/paths per direct request). Not padded to hit a round number and not trimmed to look modest either — this is what "properly" costs for a kit this dense. Organized so **every item is usable on any island**, not just Tortuga, the same shared-library principle `GROUND_TILES/WORLD_SPRITES` already use in `worldSprites.ts`.

Format notes (apply to every tile below)

- **Seamless tiling is non-negotiable** for anything used as a repeating `<Pattern>` fill (ground, paving, water, roofs, walls). Edges must match their own opposite edge with zero gutter — bit us twice already (item 89's original crops, the "one grass source" repeat in item 96). Verify with a tiled preview (4x4/5x5, offline) before handing tiles back.
- **Linear kits (curbs, plinths, steps-as-runs) need corner/junction/end pieces, not just a straight strip** — a curb that only has a straight tile will show the exact hard-rectangle-overwrite seam item 96 just fixed for roads, the moment it turns a corner. Section III below spells these out explicitly so nothing gets cut "straight-only" by accident.
- **Curb and plinth pieces need two widths**, matching the two street styles already in the game ('main' at 20 units wide, 'path' at 14) — a curb sized for the wide road will look wrong hugging the narrow one. Doesn't double the whole list; just keep both widths in mind when cutting §III/§IV.
- **2-4 variants minimum for anything tiled edge-to-edge at scale** (grass, sand, water, plaza paving) — a single source always reads as wallpaper once several copies are on screen together.
- **One consistent top-down angle and light direction across the entire sheet.** The reference image is a slight-isometric angle with a consistent upper-left light source — match that across every single item below, not just within one category. Mixing angles is the fastest way to make an otherwise well-drawn tile look wrong once it's placed next to everything else.
- **Real alpha transparency on every irregular-silhouette item** (props, vegetation, steps, decals) — a tile that ships with genuine alpha (like `pier_module.png` turned out to) skips the gradient/edge-threshold segmentation pass entirely; flattened-to-RGB costs real cutting time.

I. Natural ground (base fill tiles) — 13

1. Grass — light green
2. Grass — dark green
3. Grass — flowering/clover
4. Grass — worn/patchy (high-traffic)

5. Sand — dry, inland/dune
6. Sand — wet, tideline
7. Dirt — packed path brown
8. Dirt — loose/tilled earth
9. Dirt — dry, cracked
10. Rocky/scree ground
11. Marsh/mud ground
12. Jungle floor (leaf litter/undergrowth)
13. Snow/frost ground (future-proofing only)

II. Water & coastline — 15

14. Deep sea — variant A
15. Deep sea — variant B
16. Shallow/reef water
17. Foam/surf edge strip (directional — foam one side, clean water the other)
18. Breaking wave — frame 1
19. Breaking wave — frame 2
20. Breaking wave — frame 3
21. Beach wave — static fallback (for anywhere animation isn't wired up)
22. Sand-to-grass transition edge (directional strip)
23. Sand-to-water transition edge (directional strip)
24. Rock-to-water transition edge (directional strip, for cliff coastlines)
25. Tide pool (small scattered prop, not a tile)
26. Harbor/dockside water (murkier than open sea)
27. Harbor water — ripple/reflection variant
28. Harbor water — hull-shadow variant (for under a docked ship)

III. Roads, curbs & plaza paving — 17

The core ask from the reference image. Every numbered curb piece needs both the 'main' -width and 'path' -width version (see format notes).

29. Plaza cobblestone — small light pavers
30. Plaza cobblestone — larger flagstone
31. Plaza cobblestone — worn/mossy patch
32. Narrow alley cobblestone (finer paving between buildings)
33. Curb — straight edge
34. Curb — outer corner (convex, road turns away)
35. Curb — inner corner (concave, road turns into itself)

- 36. Curb — T-junction
- 37. Curb — 4-way cross junction
- 38. Curb — dead-end cap
- 39. Curb — flush ramp/dip (a cart track crosses without a step)
- 40. Road-to-dirt-path transition (curbed main street meets uncurbed path)
- 41. Road-to-plaza transition (curb dissolves into the open square, matching the reference image's town-square treatment)
- 42. Cobblestone-to-grass edge (no curb, softer boundary for minor streets)
- 43. Drainage grate (small inset detail prop)
- 44. Wet/puddled cobblestone patch
- 45. Moss-between-pavers overlay

IV. Building plinth / raised foundation — 6

Every building in the reference image sits on a raised stone (or wood-decked) base with a visible edge lip — nothing like this exists in the game today, buildings currently just sit flush on grass.

- 46. Plinth — straight edge (stone)
- 47. Plinth — outer corner
- 48. Plinth — inner corner
- 49. Plinth — top surface fill
- 50. Plinth — wood-decked variant (for a building on a raised deck rather than stone, like the reference's Dockside Tavern)
- 51. Plinth — wood-decked corner

V. Steps & ramps — 8

- 52. Steps — narrow, 2-step (small shop entrance)
- 53. Steps — narrow, 3-step
- 54. Steps — wide, 3-step (mid-size building)
- 55. Steps — wide, 5-step (grand entrance, raised porch)
- 56. Steps — with wood side rail
- 57. Steps — with stone balustrade
- 58. Steps — corner/turning (ascends while changing direction)
- 59. Cargo ramp (loading-dock alternative to steps, for warehouse-style buildings)

VI. Jetty / dock / pier kit — 9

Extends the pier module already shipped (item 94) rather than replacing it.

- 60. Pier module — corner/mitered turn (today's T-head/L-head bends use two straight modules meeting at a right angle — a real mitered corner piece would read cleaner)
- 61. Pier — ladder down to water
- 62. Pier — mooring post, single (no deck, marks a tie-up point without implying walkable boardwalk)
- 63. Pier — mooring post pair with rope strung between
- 64. Pier — cleat/tie-off ring (small prop)
- 65. Dock — boat launch ramp (sloped, for hauling a small boat out of the water)
- 66. Boardwalk plank — plain straight (no posts, for a harbor-front promenade that isn't over open water)
- 67. Boardwalk plank — corner
- 68. Bridge tile (nothing crosses water on land yet, but several islands' shapes would support one)

VII. Vegetation (small, individually placed) — 12

Extends NATURE_SPRITES (currently 7 entries: 2 tree types + palm, 2 bushes, a rock spire, a cave arch).

- 69. Palm tree — upright
- 70. Palm tree — windswept/leaning
- 71. Shrub — low scrub
- 72. Shrub — thorny/dry
- 73. Potted plant — barrel-planter
- 74. Potted plant — ceramic pot
- 75. Window flower box
- 76. Tall grass / reed clump
- 77. Mangrove
- 78. Dead/dry tree (for ruined/rural-outskirts areas)
- 79. Hanging vine/creeper overlay (wall-mounted, semi-transparent)
- 80. Grass tuft (small wall-base detail)

VIII. Cliffs, rocks & ruins ground — 3

- 81. Cliff-face tile (vertical rock texture, not top-down)
- 82. Rubble/ruin floor (broken masonry, distinct from plain rocky ground)
- 83. Cave floor (dark, damp stone — cave_arch exists as a prop, nothing exists for just inside one)

IX. Props — cargo & containers — 10

- 84. Barrel — standing, single
- 85. Barrel — stacked pair
- 86. Barrel — stacked pyramid (3+)

- 87. Barrel — on its side
- 88. Barrel — with rope netting
- 89. Crate — small, single
- 90. Crate — stacked pair
- 91. Crate — open (contents visible)
- 92. Sack/burlap bag — single
- 93. Sack/burlap bag — stacked pile

X. Props — lighting & signage — 8

- 94. Hanging lantern — lit
- 95. Hanging lantern — unlit
- 96. Wall sconce lantern
- 97. Standing lamppost
- 98. Sign board — rectangular, blank (for text overlay, matches the reference's carved shop signs)
- 99. Sign board — arched-top, blank
- 100. Sign board — hanging (swings from a bracket)
- 101. Sign bracket/iron mount (no board, for a hand-lettered sign to attach to)

XI. Props — fabric & decoration — 7

- 102. Awning — striped, straight
- 103. Awning — striped, scalloped edge
- 104. Bunting/pennant string
- 105. Flag on pole — skull & crossbones
- 106. Flag on pole — plain/neutral
- 107. Laundry line with hanging clothes
- 108. Window curtain/drape

XII. Props — furniture & street fixtures — 10

- 109. Bench (wood)
- 110. Stool/chair, single
- 111. Market table — bare
- 112. Market table — with goods laid out
- 113. Hitching post
- 114. Ship's wheel — wall-mounted decoration
- 115. Anchor — decorative, standing/leaning

- 116. Rope coil
- 117. Fishing net — hung to dry
- 118. Wooden ladder — leaning against a wall

XIII. Building materials — roofs — 5

For when the building art pass resumes (SHOW_BUILDINGS, currently off) — same sheet, no reason not to request it now.

- 119. Roof — blue ceramic tile
- 120. Roof — red terracotta tile
- 121. Roof — thatched
- 122. Roof — wood shingle
- 123. Roof ridge cap trim

XIV. Building materials — walls — 4

- 124. Wall — whitewashed plaster
- 125. Wall — timber-frame (dark beam + light plaster infill)
- 126. Wall — fieldstone
- 127. Wall — weathered plank siding

XV. Building materials — windows, doors & chimneys — 7

- 128. Window — shuttered, closed
- 129. Window — shuttered, open, lit interior
- 130. Window — glass pane, lit
- 131. Door — plain plank
- 132. Door — arched stone frame
- 133. Chimney — plain stone
- 134. Chimney — with smoke wisp

XVI. Ship & large dock props — 4

- 135. Ship hull — docked, broadside
- 136. Ship gangplank
- 137. Rowboat — moored
- 138. Furled-sail/rigging detail overlay (for a docked ship's static look)

XVII. Ground detail overlays (small decals) — 12

- 139. Puddle — small
- 140. Puddle — large, with reflection
- 141. Crack pattern (dry/old stone)
- 142. Moss patch
- 143. Fallen leaves scatter
- 144. Sand scatter (blown onto cobblestone near the coast)
- 145. Footprints in sand — trail
- 146. Seaweed/kelp clump
- 147. Driftwood piece — A
- 148. Driftwood piece — B
- 149. Shell/pebble scatter
- 150. Crab/gull tracks

XVIII. Interior floor tiles — 4

`BuildingScreen.tsx` renders every interior floor as a flat `backgroundColor` today (FLOOR_COLORS/INTERIOR_COLORS) — genuinely zero tile art here, same technique as outdoors.

- 151. Interior — wood plank floor
- 152. Interior — stone/flagstone floor
- 153. Interior — packed dirt floor
- 154. Interior — rug/carpet accent (placeable overlay, not a full-room tile)

XIX. Per-island biome ground sets — 10

Grounded in each island's actual brief (`islands.ts`), not generic requests.

- 155. Cow Island — pasture grass (shorter-cut, lighter than Tortuga's)
- 156. New Providence — town sand/grass variant (visually distinct from Tortuga's own)
- 157. Roatán — reef-adjacent shallow water variant
- 158. Port Royal — cursed/waterlogged ground (dark, algae-tinted — highest-value single biome ask, nothing currently supports "this place looks wrong")
- 159. Port Royal — algae overlay decal
- 160. Île Sainte-Marie — dense, misty jungle floor
- 161. Île Sainte-Marie — bioluminescent accent overlay (optional/stylized)
- 162. Ocracoke Inlet — dune grass clump
- 163. Ocracoke Inlet — marsh reed clump
- 164. Ocracoke Inlet — wet sand/mud flat variant

XX. Addendum — 44 more (2026-08-14, second pass) — terrain/roads/paths-weighted

Grounded in real gaps found by re-checking existing data: `landmarks.ts` already has **La Ringot Fields** (farmland/tobacco district) and **The Forgotten Graves** with zero dedicated ground tile — both currently just sit on plain grass.

Terrain — more ground types

- 165. Farmland — tilled rows: bare brown soil in furrowed rows, for La Ringot Fields.
- 166. Farmland — planted crop rows: the same furrows with small green sprouts, a working field.
- 167. Farmland — ready-to-harvest: tall golden crop rows (tobacco or wheat), ready to cut.
- 168. Orchard ground: grass with scattered fallen fruit beneath implied trees.
- 169. Graveyard ground: patchy dirt-and-grass with small mound shapes, for The Forgotten Graves.
- 170. Salt flat: bright white, cracked mineral-crust ground for a distinct desert-coast biome.
- 171. Volcanic rock: dark basalt/obsidian ground with cooled-lava cracks, for a future volcanic island.
- 172. Ash-dusted ground: grey ash-covered grass or dirt, for anywhere near volcanic activity.
- 173. Quicksand/bog patch: a dark, wet, slightly sunken danger-flavored ground patch.
- 174. Quarry ground: bare cut stone with pickaxe/chisel marks, general mining-flavor variety.
- 175. Coral sand: pale pink-tinted beach sand for reef-adjacent coastlines.
- 176. Duel-ground floor: a packed-dirt circle with a chalked/worn boundary ring, for Blackfin's duel stages (`blackfin.ts`), which currently render on whatever terrain happens to be underneath.

Water — more variants

- 177. Stream/creek water: narrow freshwater ripple texture, visually distinct from sea/harbor water — nothing like this exists even though inland water crossings are a real gap (see the bridge items below).
- 178. Pond water: still freshwater with a lily-pad option, for an inland water feature.
- 179. Waterfall: a small cascading-water sprite/prop for a cliffside or jungle scene.
- 180. Sandbar: a shallow, exposed sand ridge sitting in open water.
- 181. Mudflat: wet, dark, exposed-at-low-tide ground for a tidal coastline.
- 182. Mangrove-root water edge: water threading between gnarled root shapes, for swampy coastlines.
- 183. Underground/cave stream: a darker, dimmer water tile for an in-cave water feature.

Roads & paths — more variants

- 184. Herringbone plaza inlay: a "hero" cobblestone tile with a herringbone/radial pattern for a town-square centerpiece.
- 185. Mosaic/emblem inlay: a one-off decorative paving tile with an inlaid compass rose or crest, for a plaza focal point.
- 186. Gravel path: a lighter, stonier loose-gravel texture, distinct from packed dirt.
- 187. Cart-rut path: a dirt path with visible parallel wheel-rut grooves, for character.
- 188. Sandy footpath: a path made of packed beach sand, for trails near the coast.

- 189. Wood-plank street: a full street surfaced in wood planks (not just piers), for a lower-town or swamp-adjacent quarter.
- 190. Elevated boardwalk with posts: a raised wood walkway over mud/marsh, distinct from a pier over open water.
- 191. Path fork/Y-junction: a three-way branch piece, rounding out the junction set beyond T and cross (§III already covers those two).
- 192. Sloped path with built-in steps: small stepped risers built into a dirt trail on a hillside, distinct from a building's entrance steps (§V).
- 193. Switchback trail segment: an angled mountain-trail piece for zigzagging up a slope.
- 194. Log crossing: a single fallen-log bridge over a narrow stream.
- 195. Rope-and-plank rickety bridge: a swaying jungle-style crossing, an alternative to item 68's plain "bridge tile."
- 196. Stone arch bridge: a sturdier masonry bridge for a formal town crossing — the third variant on the same bridge idea, so whoever's cutting the sheet can pick per-scene instead of one generic bridge everywhere.
- 197. Stepping stones: a line of individual flat stones crossing shallow water or a garden.
- 198. Plank-reinforced mud patch: a short stretch of boards laid over a muddy trail section.
- 199. Cliffside rope railing: a post-and-rope safety rail to run along a clifftop path.

Fences & boundaries (needed to dress farmland/pasture — nothing like this exists today)

- 200. Wood fence — straight: a simple post-and-rail section.
- 201. Wood fence — corner: matching corner piece.
- 202. Wood fence — gate: a gate section reading as a deliberate opening in the fence line.
- 203. Stone wall — straight: a low dry-stone wall section, for a more permanent boundary.
- 204. Stone wall — corner: matching corner piece.
- 205. Hedgerow: a trimmed green living-fence section, softer than wood or stone.

Bonus — a few more worth having

- 206. Cave wall: a vertical, damp stone-wall texture for cave interiors — distinct from item 81's sunlit exterior cliff face (mossier, darker, wetter).
- 207. Trade-route marker path: a subtly worn/lighter dirt-path variant marking a well-traveled trade route, distinct from an ordinary path.
- 208. Gallows/hanging-cage ground stain: a dark, stained patch of ground for a landmark like that.

Priority if the sheet can't cover everything at once

- 1. **§III Roads/curbs/plaza + §IV Plinths + §V Steps** — the direct ask, and the biggest gap between how the map currently looks and the reference image. Nothing in this trio exists today.
- 2. **§II Water/coastline** — still the single biggest natural-terrain gap, unchanged from before.
- 3. **§I Grass/sand/dirt variants** — fixes the tiling repeat already shipped a workaround for.
- 4. **§VI Jetty/dock kit** — builds on art already proven to work (item 94-95).
- 5. **§IX-§XII Props** — cheap per-item, high density payoff, matches the reference image's clutter.

6. **§XX's stream/bridge/farmland/fence cluster** (177-205) — the addendum's own highest-value group: inland water crossings and La Ringot Fields/The Forgotten Graves ground are real, already-named gaps, not speculative asks.
7. Everything else, roughly in the order listed.
